

COMP 7036 – Applied Research Methods in Software Development

Instructor: Borna Nouredin

Assignment 2

Total marks: 100

Submit a literature review, preferably for the research proposal you are preparing for the course.

It should have a reasonable number of references, say between 10 and 20. A proper reference section at the end will be expected, with properly formatted citations. Your text should cite those references, and give credit where it is due.

The review of papers should be organized into groups as discussed in class. Among the factors that should be reviewed include the methodology, whether the conclusions are justified, and how the papers are related to the problem you are proposing to address.

The review should finally point to the need for the research you are proposing, and summarize at the end the findings of existing literature.

Assignments must be word-processed and submitted before the dropbox is closed. You may submit your assignments in either Word or PDF formats (PDF preferred). Assignments must be submitted using the filename A00<ID>_Asst2.<EXT>, where <ID> is your student number and <EXT> is the file extension (e.g., .doc, .docx, .pdf). Late assignments will not be accepted.
