

Final Presentation Format

Date:

Start:

End:

Each time will have a maximum of **25 minutes** to make their presentation. The content will be centered on technical summaries, complete with system diagrams, log file data, and other relevant packet captures.

Each team member will be required to summarize the following:

- All the design and implementation activities they were engaged in and other tasks that they actively participated on.
- All the testing and analysis activities they were engaged in and actively participated on.
- The tools that were used in the defensive and attacking activities.
- Present summarized data from IDS logs, firewall logs, system log files, etc., as part of their presentation.
- All the lessons learned for this “Honeynet” exercise.
- Recommendations for both defense and attacks.

The class will then be allowed to ask questions to the whole team.
