

### Final Project Data

**CAUTION: Make sure you untar and unzip the data safely, meaning have all the necessary anti-virus and malware protection tools running on your machines.**

The complete archive (**projdata-2018.tar.bz2** ) can be retrieved from 192.168.0.26 using SCP as follows:

**scp foo@192.168.0.26:/home/foo/projdata-2018.tar.bz2 .**

The password is the same as the one used to access the course materials.

This is a large file (approx 5 GB) so make sure you have enough space on your drive.

I will be discussing tips and techniques in handling a data set this size during lectures.

- The best way to extract everything is as follows:

**tar -xvf projdata-2018.tar.bz2**

### Updates:

- The MD5 sum for the tarball is: a4c3895a125a4384bf44b351e55d151f
