

Comp 7006 - Lab #6

Access Control and Security – xinted

Due Date: October 17, 2017

Objective: To set up TCP-wrapped services.

Your Mission:

You are required to install and set up controlled access to **Telnet** services on your server. You may use *xinted* in order to accomplish this.

Constraints:

- Restrict access to the above services to the instructor's workstation only.
- Access to the services will only be allowed between 1800 and 2100 hrs.
- All connection attempts to your services have to be logged.

Requirements:

1. Demonstrate your working servers in the lab.
